

# Online Emergency Management Onboarding for Authorised Officers Project 2022-23

Biosecurity and Food Safety (BFS) protects the NSW community, environment and economy from biosecurity & food safety risks

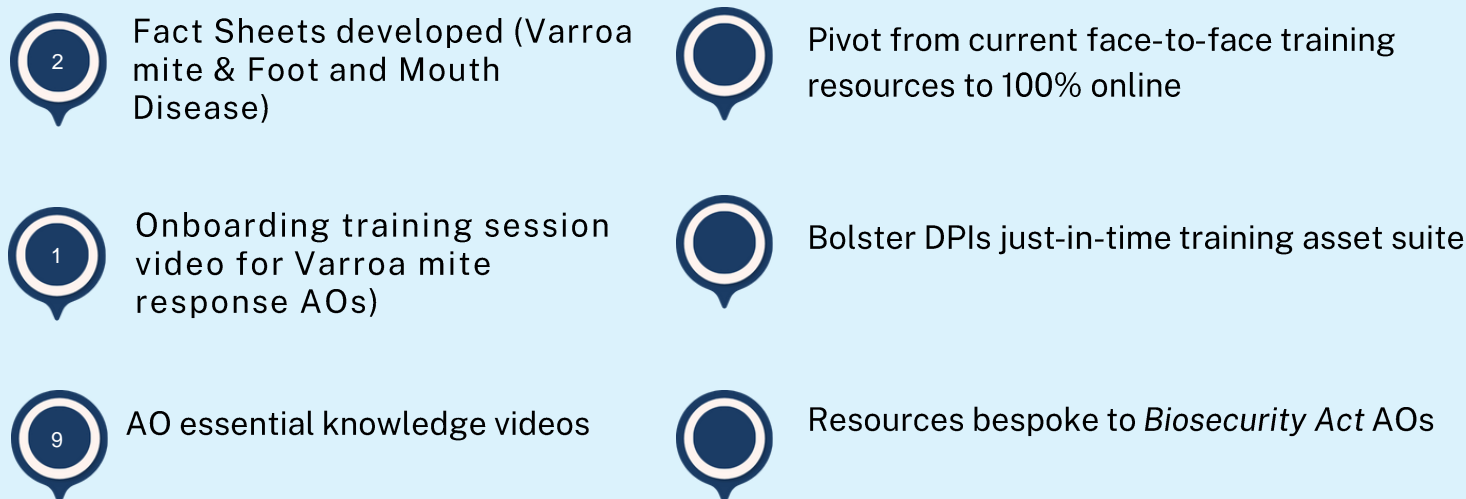

## Project Overview

BFS Compliance developed a series of microlearning resources for authorised officers (AOs) and volunteers temporarily appointed as AOs, to support onboarding into a biosecurity emergency response.

The resources are an essential suite of fully animated short videos for AOs, partly delivered by an artificial intelligence (AI) generated webinar. They are based on existing biosecurity legislation training resources, with slight variations to make them scenario or emergency specific. Printed resources were also developed to help navigate, understand, and operationalise the *Biosecurity Act 2015*.

The resources are hosted on EMtrain, NSW DPIs emergency management (EM) learning and development program that enables 'anytime learning' for users. The printed resources will be incorporated into NSW DPIs wider EM Response Induction Program on an as needs basis.

## Project Statistics

## Project Outcomes

These resource support a consistent approach to AO actions and behaviours during a biosecurity emergency.

In delivering these resources, we created the content and story boards, liaised with a 3<sup>rd</sup> party animation specialist, and generated the AI webinars. This was a significant achievement as our staff were heavily involved in DPI activities for the Varroa mite EM response in 2022/23.

The expertise of our staff has resulted in the development of specific storyboard and content review templates that can be used for similar future projects, which will ensure a seamless integration into EMTrain.
